

m-FC AGAR (7397)

Intended Use

m-FC Agar is used with rosolic acid for the detection and enumeration of fecal coliforms by membrane filtration.

Product Summary and Explanation

Geldreich et al. formulated a medium to enumerate fecal coliforms (FC) using the membrane filter (m) technique without prior enrichment.¹ Fecal coliforms, i.e., those found in feces of warm-blooded animals, are differentiated from environmental coliforms by their ability to grow at $44.5 \pm 0.5^\circ\text{C}$.²

Many standard method membrane filtration procedures recommend m-FC media for testing water. The American Public Health Association (APHA) specified m-FC media and incubation at $44.5 \pm 0.5^\circ\text{C}$ in the fecal coliform procedure and other tests.^{2,3} The Association of Official Analytical Chemists (AOAC) specifies m-FC Agar for detecting total coliforms and fecal coliforms in foods.⁴ The US Environmental Protection Agency specified using m-FC media in fecal coliform methods for testing water by the direct MF method or the delayed-incubation MF methods.^{5,6}

Principles of the Procedure

Enzymatic Digest of Casein and Enzymatic Digest of Animal Tissue provide nitrogen, carbon, and minerals in m-FC Agar. Yeast Extract is a source of vitamins and trace elements. Sodium Chloride maintains the osmotic balance. Lactose serves as a carbohydrate source. Bile Salts inhibit growth of Gram-positive bacteria. The differential indicator system combines Aniline Blue and Rosolic Acid which is added as a supplement. Agar is the solidifying agent.

Formula / Liter

Enzymatic Digest of Casein	10.0 g
Enzymatic Digest of Animal Tissue.....	5.0 g
Yeast Extract.....	3.0 g
Sodium Chloride	5.0 g
Lactose	12.5 g
Bile Salts	1.5 g
Aniline Blue	0.1 g
Agar	15.0 g

Final pH: 7.4 ± 0.2 at 25°C

Formula may be adjusted and/or supplemented as required to meet performance specifications.

Supplement

1% Rosolic Acid, 10 mL

Precautions

1. For Laboratory Use.
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

Directions

m-FC Agar

1. Suspend 52 g of the medium in 1 L of purified water containing 10 mL of 1% Rosolic Acid in 0.2 N NaOH.
2. If necessary, adjust pH to 7.4 with 1N HCl.
3. Heat with frequent agitation and boil for one minute to completely dissolve the medium.
4. Cool to $45 - 50^\circ\text{C}$ and pour plates.
5. DO NOT AUTOCLAVE.

Rosolic Acid: Dissolve 1 g in 100 mL of 0.2 N NaOH to prepare a 1% solution.

Quality Control Specifications

Dehydrated Appearance: Powder is homogeneous, free flowing, and pale to light grey-blue to greyish-beige.

Prepared Appearance: Prepared unsupplemented medium is dark blue and clear to slightly hazy. Prepared appearance with 1% Rosolic Acid is trace to slightly hazy and purple to reddish purple to cranberry red.

Expected Cultural Response: Cultural response incubated aerobically on m-FC Agar at $44.5 \pm 0.5^\circ\text{C}$ and examined for growth after 22 - 24 hours.

Microorganism	Approx. Inoculum (CFU)	Expected Results	
		Growth (with Rosolic Acid)	Reaction
<i>Enterobacter aerogenes</i> ATCC® 13048	10 - 100	Good	Blue-grey colonies
<i>Escherichia coli</i> ATCC® 11775	10 - 100	Good	Dark blue colonies
<i>Escherichia coli</i> ATCC® 25922	10 - 100	Good	Dark blue colonies
<i>Salmonella typhimurium</i> ATCC® 14028	10 - 100	Good	Reddish-grey colonies
<i>Staphylococcus aureus</i> ATCC® 25923	1000	Inhibited	---

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

1. Filter duplicate samples through separate membrane filters.
2. Transfer filters to surface of separate m-FC Agar plates.
3. Place each plate in a separate waterproof plastic bag. Submerge in waterbath at $44.5 \pm 0.5^\circ\text{C}$; incubate for 22 - 24 hours.

Results

Fecal coliforms will be various shades of dark blue. Non-fecal coliforms are grey to reddish-grey to cream-colored.

Storage

Store sealed bottle containing the dehydrated medium at $2 - 30^\circ\text{C}$. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light.

Expiration

Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if medium has changed from the original color. Expiry applies to medium in its intact container.

Limitations of the Procedure

1. Due to varying nutritional requirements, some strains may be encountered that grow poorly or fail to grow.
2. A few non-fecal coliform colonies may be observed on m-FC Agar due to the selective action of the elevated temperature and the addition of rosolic acid. It may be useful to elevate the temperature to $45 \pm 0.2^\circ\text{C}$ to eliminate *Klebsiella* strains from the fecal coliform group.²

Packaging

m-FC Agar	Code No.	7397A	500 g
		7397B	2 kg
		7397C	10 kg
